

CSCI-101 Programming I  
April 1 Quiz

Name \_\_\_\_\_

1. Using a while-loop compute the sum of numbers between 20 and 30 (inclusively).
2. Declare a method which is named **printName** and has 2 parameters. The first parameter is a String which holds a first name and the second parameter is a String which holds a last name. The method prints to the console the first name followed by the last name.
3. Declare a method named **add** which returns an integer and has two integer parameters. The method returns the sum of the two integers passed into the method.
4. Write a fragment of code that uses the **printName()** method to print "Alice Walker".
5. Write a fragment of code that reads two integers from the keyboard, uses the **add()** method to compute the sum of two integers, and prints the sum to the console.
