

CSCI-101 Programming 1

Prelab for week beginning Aug 29

Before arriving in lab please do the following...

Log onto cs.bridgewater.edu and change your working directory to your repository directory.
See Aug 26 notes for help if needed.

Make a directory in your repository named **courses**.

```
$ mkdir courses
```

Change your working directory to the **courses** directory.

```
$ cd courses
```

Make a directory in your courses directory named **hw**.

```
$ mkdir hw
```

Change your working directory to the **hw** directory.

```
$ cd hw
```

Use vi and today's lecture notes (on the course webpage) to create a program that asks the user for the length and height of a rectangle, reads in the data, computes the area, and prints the area to the screen. Name the program anything you like.
