

CSCI-101 Programming 1

Lab 15

INSTRUCTIONS

Create a directory inside your **labs** directory named **lab15**. Put all files for this lab in this new directory.

Write a class named **Lab15** that does the following;

- Ask the user to enter an integer.
- Read the value entered by the user and store the value in a variable named **count**.
- Create an array whose length is equal to the value in **count**.
- Fill the array with random numbers between 1 and 100 (inclusively).
- Ask the user to enter a file name.
- Read the value entered by the user and store the value in a variable named **fileName**.
- Write the contents of the array to a file whose name is equal to the value in **fileName** all on a single line with commas between the integers.
