

CSCI-102 Programming II

Lab 1 Part A

Introduction

Your instructor has given you a slip of paper that indicates topics taught in Programming I that you need to work at in order to master. This part of the lab provides you with problems that will help you towards that goal. If after completing this lab you realize that you still have not mastered a particular topic it is your responsibility to do so.

Please know that it is imperative that you master the topics in Programming I soon as the labs in Programming II will assume you have mastered the material in Programming I.

Instructions

Create a directory named **csci102** in the root of our shared course repository. Inside the **csci102** directory, create a directory named **labs**. Inside the **labs** directory, create a directory named **lab1**.

On the course website, next to **Lab 1 Part A**, you will find 8 sets of problems; one for each of the topics on the Programming I assessment quiz that you took. For each of the topics that you have yet to master (as specified on the paper given to you by your instructor), complete the corresponding set of problems and put the source code for the set in the **lab1** directory.
