CSCI-101 Programming II
Lab 10c

In the **lab10** directory, create a program named **EntryTest** that satisfies the following requirements.

In main, create an **ArrayList** that can hold 10 instances of the **Entry** class where the **keys** are **Strings** and the **values** are **Strings**.

Store the following data in the array.

Key (String)	Value (String)
Gamma	03b3
Alpha	03b1
Delta	03b4
Beta	03b2

Use streams to sort the elements according to their keys and print the key/value pairs to the screen.

Use streams to sort the elements according to their values and print the key/value pairs to the screen.
