

CSCI-101 Programming 2

Lab 6, Part b

INSTRUCTIONS

Inside the **lab6** directory create a file named **Lab6b.java** and include in the file code that satisfies the following.

1. Create an array that can hold 5 integers. Populate the array using data from the keyboard. Sort the array and print the contents of the array to the screen.
2. Create an array that can hold 5 characters. Populate the array using data from the keyboard. Sort the array and print the contents of the array to the screen.
3. Create an array that can hold 5 strings. Populate the array using data from the keyboard. Sort the array and print the contents of the array to the screen.
4. Create an array that can hold 5 references to **java.time.Year** objects. Populate the array using data from the keyboard. Sort the array and print the contents of the array to the screen.
5. Create an array that can hold 5 references to **java.time.LocalDate** objects. Populate the array using data from the keyboard. Sort the array and print the contents of the array to the screen.
