

CSCI-230 Web Scripting

HOMEWORK 6 - POSITIONING ELEMENTS

1. Add an HTML file named **a6.html** to your coursework directory.
2. Add a CSS file named **a6.css** to your CSS directory.
3. Add a <link> tag in your **a6.html** to load your **a6.css** file.
4. Add a <main> element to your HTML file.
5. Inside the <main> element, use multiple <div> elements along with CSS positioning and transforms to construct on the page the initials of your name.
6. Utilize all 4 of the methods of translating elements shown in Lecture 7.
7. Stylize each initial differently to produce a composition that is creative and visually interesting.
