Experiment 11
CSCI-230 Web Scripting
Fall 2024

Part I

Inside the **experiments** directory in your repository create a *subdirectory* named **e11**.

Inside the **e11** directory copy the contents of Lecture 15.

In **csci230/index.html** add a link to **csci230/experiments/e11/home.html**.

Part II

Add code to **createAccount.html** and **createAccount.css** so that the page displays a form that allows a user to create a new account. The form should include fields for first name, last name, username and password, and a button.

If any of the fields are empty when the button is pressed, an error message should be displayed on the screen. Otherwise, the user's username should be stored in localStorage and the user redirected to home.html.

Part III

Add code to **logIn.html** and **login.css** so that the page displays a form that allows a user to log in. The form should include fields for username and password, and a button.

If any of the fields are empty when the button is pressed, an error message should be displayed on the screen. Otherwise, the user's username should be stored in localStorage and the user redirected to home.html.

Part IV

Modify **themes.css** and **common.css** (as well as the other css files) to make the site your own. Use a unique color pallet and other css properties.

Part V

Add code to **home.html** and **home.css** to make it interesting.
