

CSCI-432 Client-side Development

Create a new app named **app10**.

The app is due Wednesday, March 8

Visuals

- The app should display a container of cards and a form.
- The form should contain at least 2 elements that can hold information and a submit button.
- When the submit button is pressed, a new card with the form information is added to the card container.

Code

- The app will consist of at least 3 component.
 - A component that holds the form and submit button
 - A component for a single card
 - A "parent" component that displays the card container (with cards), and form component.
- The information in the form is bound to the parent component using v-model
- The submit button emits a custom event to the parent component.
- The event handler in the parent will add the bound data to an array.
- The card container uses v-for with the array to display instances of the card component.
