

CSCI-432 Client-side Development

Create an app named app12 that satisfies the requirements below.

The app is due Wednesday, March 17.

Visuals

- The app's home view should display a home link and an items link in the navigation bar and an image or something in the main section of the page.
- When the user selects the items link, the app should render a list of items and display a search box in the navigation bar.
- When the user enters a specific item in the search box the app should render two components (an image and information about the item) in the main section of the page.

Code

- The app should use Vue routing for the apps navigation.
