

# CSCI-432 Client-side Development

Create an app named **app12** that satisfies the requirements below.

The app is due Wednesday, March 29.

---

## Visuals

- The app's home view should display information consisting of a first name, last name, street address, city, state, and zip code.
- The app's home view should also have a link that redirects the app to an edit view.
- The edit view should allow the user to edit the information on the home view.
- The edit view should have a submit button that redirects the user to the home view.

---

## Code

- The app should use Vue routing for the apps navigation.
- The app should store the information (first name, last name, street address, city, state, and zipcode) in a Pinia store.
